The following are valid formats:

ABS -------- GI and AB
ALL -------- BIB, AB, IND, RE, Single-step Reactions
APPS ------- AI, PRAI
BIB -------- AN, plus Bibliographic Data
CAN -------- List of CA abstract numbers without answer numbers
CBIB ------- AN, plus Compressed Bibliographic Data
DALL ------- ALL, delimited (end of each field identified)
IABS ------- ABS, indented with text labels
IALL ------- ALL, indented with text labels
IBIB ------- BIB, indented with text labels
IND -------- Indexing data
IPC -------- International Patent Classifications
ISTD ------- STD, indented with text labels
OBIB -------- AN, plus Bibliographic Data (original)
OIBIB ------- OBIB, indented with text labels

SBIB -------- BIB, no citations
SIBIB ------- IBIB, no citations

MAX -------- Same as ALL
PATS ------- PI, SO
SCAN ------- TI and FCRD (random display, no answer number.  SCAN
             must be entered on the same line as DISPLAY, e.g.,
             D SCAN.)
SSRX ------- Single-Step Reactions (Map, Diagram, and Summary for
             all single-step reactions)
STD -------- BIB, IPC, and NCL

CRD -------- Compact Display of All Hit Reactions
CRDREF ----- Compact Reaction Display and SO, PY for Reference
FHIT ------- Reaction Map, Diagram, and Summary for first
             hit reaction
FHITCBIB --- FHIT, AN plus CBIB
FCRD ------- First hit in Compact Reaction Display (CRD) format
FCRDREF ---- First hit in Compact Reaction Display (CRD) format with
             CA reference information (SO, PY).  (Default)
FPATH ------ PATH, plus Reaction Summary for the "long path"
FSPATH ----- SPATH, plus Reaction Summary for the "short path"
HIT -------- Reaction Map, Reaction Diagram, and Reaction
             Summary for all hit reactions and fields containing
```

hit terms
OCC -------- All hit fields and the number of occurrences of the hit terms in each field. Includes total number of HIT, PATH, SPATH reactions. Labels reactions that have incomplete verifications.
PATH ------- Reaction Map and Reaction Diagram for the "long path". Displays all hit reactions, except those whose steps are totally included within another hit reaction which is displayed
RX --------- Hit Reactions (Map, Diagram, Summary for all hit reactions)
RXG -------- Hit Reaction Graphics (Map and Diagram for all hit reactions)
RXL -------- Hit Reaction Long (Map, Diagram, Summary for all hit reactions)
RXS -------- Hit Reaction Summariers (Map and Summary for all hit reactions)
SPATH ------ Reaction Map and Reaction Diagram for the "short path". Displays all single step reactions which contain a hit substance. Also displays those multistep reactions that have a hit substance in both the first and last steps of the reaction, except for those hit reactions whose steps are totally included within another hit reaction which is displayed

To display a particular field or fields, enter the display field codes. For a list of the display field codes, enter HELP DFIELDS at an arrow prompt (=>). Examples of combinations include: D TI; D BIB RX; D TI, AU, FCRD. The information is displayed in the same order as the specification. All of the formats, except CRD, CRDREF, FHIT, PATH, FPATH, SPATH, FSPATH, FCRD, FCRDREF, HIT, RX, RXG, RXS, SCAN, and OCC, may be used with the DISPLAY command to display the record for a specified Accession Number.

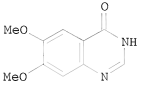
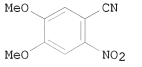
146:421938 One-pot conversion of 2-nitrobenzonitriles to quinazolin-4(3H)-ones and synthesis of gefitinib and erlotinib hydrochloride. Chandregowda, Venkateshappa; Rao, Gudapati Venkateswara; Reddy, Goukanapalli Chandrasekara (Vittal Mallya Scientific Research Foundation, Bangalore, 560004, India). Heterocycles, 71(1), 39-48 (English) 2007. CODEN: HTCYAM. ISSN: 0385-5414. Publisher: Japan Institute of Heterocyclic Chemistry.

GI



I



II

AB A simple and efficient one-pot conversion of 2-nitrobenzonitriles to quinazolin-4(3H)-ones involving reduction, formylation, hydrolysis and cyclization is reported. E.g., quinazolin-4(3H)-one derivative I was prepared with 85% yield by reacting the corresponding 2-nitrobenzonitrile II with hydrazine using FeCl3 in MeOH/H2O followed by treating the reaction mixture with formic acid and HCl. These quinazolinones have been used for making in economical way the anticancer drug mols. gefitinib (Iressa) and erlotinib HCl (Tarceva).

145:271722 Fluorine-18 labeling of 6,7-disubstituted anilinoquinazoline derivatives for positron emission tomography (PET) imaging of tyrosine kinase receptors: Synthesis of 18F-Iressa and related molecular probes. Seimbille, Yann; Phelps, Michael E.; Czernin, Johannes; Silverman, Daniel H. S. (Ahmanson Biological Imaging Division, Department of Molecular and Medical Pharmacology, University of California, Los Angeles, CA, 90095-6942, USA). Journal of Labelled Compounds & Radiopharmaceuticals, 48(11), 829-843 (English) 2005. CODEN: JLCRD4. ISSN: 0362-4803. Publisher: John Wiley & Sons Ltd..

AB Inhibitors of tyrosine kinase enzymic activity are a promising new class of antineoplastic agents. Although clin. studies performed over the last decade give more insight on the potential therapeutic applications of such drugs, identification of the individual patients who might benefit from them remains a major challenge. The authors have developed a synthetic strategy for the production of a wide variety of radiolabeled 6,7-disubstituted 4-anilinoquinazolines suitable for non-invasive imaging of tyrosine kinase receptors to predict therapy effectiveness. Three new F-18 labeled radiopharmaceuticals based on the therapeutic agents Tarceva, Iressa, and ZD6474 were synthesized. Decay-corrected yields were 25-40% for a total synthesis time of 120 min, thus providing F-18 labeled tyrosine kinase inhibitors in quantities and times practical for use as PET radiopharmaceuticals.

L3 ANSWER 5 OF 10 CASREACT COPYRIGHT 2008 ACS on STN

144:370039 Synthesis and biological evaluation of allenic quinazolines using palladium-catalyzed hydride-transfer reaction. Nakamura, Hiroyuki; Onagi, Shinya (Department of Chemistry, Faculty of Science, Gakushuin University, Mejiro, Tokyo, 171-8588, Japan). Tetrahedron Letters, 47(15), 2539-2542 (English) 2006. CODEN: TELEAY. ISSN: 0040-4039. Publisher: Elsevier B.V..

AB Allenic quinazolines were designed as mimics of Tarceva, which is an epidermal growth factor receptor (EGFR) tyrosine kinase inhibitor, and synthesized from the corresponding 4-(iodoanilino)quinazolines or 4-(iodophenoxy)quinazolines with N,N-dicyclohexylprop-2-ynylamine by the Sonogashira coupling followed by palladium-catalyzed hydride-transfer

reaction. Cell growth inhibition of the new compds. toward A431, Kato III, SKBR3, and HepG2 was examined One of the compds. synthesized, showed a similar cell growth inhibition to Tarceva. Moreover, two other compds. exhibited a specific growth inhibition toward Kato III cells (IC50 = 12 and 4.7 μM, resp.), although a significant inhibition toward other three cell lines was not observed at a 100 μM concentration of compds.

AB Purine bases and their bioisosteric analogs are widely used as building blocks in combinatorial chemical Recently a great number of fused pyrimidine derivs. became known as potential drug mols. against various types of proliferative diseases, caused by over-expression of protein kinases. One of the most important compound families are quinazolines: e.g. the best inhibitor of EGFR tyrosine kinase is PD153035 (6,7-dimethoxy-4-(3'-bromophenyl)amino-quinazoline) [2] and IRESSA (gefitinib, ZD1839) [3], developed from this compound family, is presently the only one approved and

granted drug by the FDA for the treatment of advanced non-small-cell lung cancer (NSCLC). KF31327 (3-ethyl-8-[2-(4-hydroxymethylpiperidino)benzylamino]-2,3-dihydro-1H- imidazo[4,5-g]-quinazoline-2-thione dihydrochloride) from this group, showed significantly higher inhibitory activity on cyclic GMP-specific phosphodiesterase compared with those of sildenafil (Viagra). The synthetic procedures of the example compds. are based on imidoyl chloride intermediates that were prepared from the appropriate 3H-quinazoline-4-ones. Although the key intermediates, quinazoline-4-ones, have been known since more than hundred years, their synthetic procedures have been improved much only in the past ten years. In this paper we reviewed the efficient synthetic methods of quinazolin-4-ones; and presented a novel, reliable method for their synthesis. There was no considerable effect of microwave-, or traditional thermal activation on the yield and compound purity.

AB This invention pertains to a method for producing 6,7-bis(2-methoxyethoxy)quinazolin-4-one, which comprises reacting Et 2-amino-4,5-bis(2-methoxyethoxy)benzoate with a formic acid compound in the presence of an ammonium carboxylate. For example, Et 2-amino-4,5-bis(2-methoxyethoxy)benzoate (preparation given) was reacted with Me orthoformate in MeOH in the presence of NH4OAc to give the title compound (91%). This invention provides a convenient method to prepare the title compound from Et 2-amino-4,5-bis(2-methoxyethoxy)benzoate in high yield.

AB Disclosed is a process for producing a quinazolin-4-one derivative represented by the following formula (I) (wherein R1, R2, R3, and R4 each represents a group not participating in the reaction and R1, R2, R3, and R4 may be bonded to each other to form a ring) which comprises reacting an anthranilic acid derivative represented by the following formula (II) (wherein R1-R4 are defined as above; R5 represents hydrogen or a hydrocarbon group) with a formic acid derivative (in particular orthoformate ester) in the presence of an ammonium carboxylate. This process gives 3,4-dihydroquinazolin-4-one derivs. I, which are useful as intermediates for drugs and agrochems., from anthranilic acid derivs. in high yields in a simple method under mild conditions and is industrially suitable. Thus, 5-methoxy-4-(3-chloropropoxy)anthranilic acid Me ester 161.5, Me orthoformate 156.5, ammonium acetate 113.7 g, and 300 mL MeOH were added to a 1,000 mL stainless steel pressure vessel, allowed to react at 90-95° and 0.1-0.3 MPa for 8 h, treated with 600 mL H2O, stirred at 0-10° for 1 h, and filtered to give, after washing the crystals with 600 mL H2O and drying them at 60° under reduced pressure, 94% 6-methoxy-7-(3-chloropropoxy)quinazolin-4-one (152.8 g).

AB 4,5-Substituted-2-formylaminobenzamides (I) are produced by reacting the corresponding aminobenzamides with formic acid in an organic solvent, and I are further converted into 6,7-substituted-quinazolin-4-ones of the general formula II [R1, R2 = H, (un)substituted alkyl, etc.] by cyclization in the presence of a base. I are pharmaceutical intermediates. 6,7-Dimethoxy-3H-quinazolin-4-one was prepared in 93% yield by the above-mentioned process.
